TIRUPATTUR - 635901A CRM APPLICATION FOR  
THE CHAI SHOP & CO**

## **User Story:**

As a sales representative at TheChaiShop&Co, I want to efficiently manage customer relationships and streamline sales processes using our CRM application.

I want to easily access and update employer details, as well as distinguish between online and offline customer records using record types, allowing for personalized interactions.

Additionally, I need the application to automate sales calculations, such as order quantity and total bill amount, to ensure accurate and efficient transactions.

Moreover, I require the ability to generate insightful reports and dashboards to summarize and analyze sales data effectively, aiding in decision-making and strategy development.

Lastly, I would like the application to automate email notifications to customers on their birthdays, informing them of special offers tailored to celebrate their special day, enhancing customer engagement and loyalty.

## **1. INTRODUCTION**

### **1.1 Project Overview :**

The project “A CRM Application for TheChaiShop&Co” focuses on developing a Salesforce-based Customer Relationship Management (CRM) system to manage customer, employer, and enterprise accounts efficiently. The system automates sales processes, maintains customer records, generates reports, and improves customer engagement through automated notifications.

The project user story and objectives are defined in the initial section of the document

### **1.2 Purpose :**

The purpose of this project is to:

- **To maintain customer details and contact information.**

- To manage customer orders and purchase history.
- To track sales and customer interactions.
- To provide better and faster customer service.
- To help the shop understand customer preferences.
- To manage products and stock efficiently.
- To generate useful reports for business management.
- To improve customer satisfaction and encourage repeat customers.

## IDEATION PHASE

### 2.1 Problem Statement (Customer Problem Statement Template)

| PS   | I am<br>(Customer)   | I'm trying<br>to                        | But                                | Because                               | Which<br>makes me<br>feel    |
|------|----------------------|-----------------------------------------|------------------------------------|---------------------------------------|------------------------------|
| PS-1 | Sales Representative | Manage customer orders and billing      | Calculations are often incorrect   | Order quantity and billing are manual | Stressed and inefficient     |
| PS-2 | Store Manager        | Monitor sales and customer records      | Reports are delayed and incomplete | Data is stored in multiple files      | Confused and dissatisfied    |
| PS-3 | Customer             | Receive personalized offers and updates | I do not get timely notifications  | There is no automated communication   | Disconnected and undervalued |

## Problem Statements – TheChaiShop&Co CRM Application

| PS   | I am (Customer)                                                                                        | I'm trying to                           | But                                                                                                                    | Because                               | Which makes me feel                                                                                                 |
|------|--------------------------------------------------------------------------------------------------------|-----------------------------------------|------------------------------------------------------------------------------------------------------------------------|---------------------------------------|---------------------------------------------------------------------------------------------------------------------|
| PS-1 |                       | Manage customer orders and billing      | Calculations are often incorrect                                                                                       | Order quantity and billing are manual |                                  |
| PS-2 |  Sales Representative | Monitor sales and customer records      | Reports are delayed and incomplete                                                                                     | Data is stored in multiple files      | Stressed and inefficient<br>     |
| PS-2 |                       | Monitor sales and customer records      | Reports are delayed and incomplete                                                                                     | Data is stored in multiple files      | Confused and dissatisfied<br>    |
| PS-3 |  Customer             | Receive personalized offers and updates | I do not get timely notifications<br> | There is no automated communication   | Disconnected and undervalued<br> |

## 2.2 Empathy Map Canvas

### Target Users

- Sales Representatives
- Managers
- System Administrators
- Business Analysts

### Empathy Analysis

| Aspect       | Description                             |
|--------------|-----------------------------------------|
| Think & Feel | Need accurate customer data and reports |
| Hear         | Feedback from management                |
| See          | Multiple registers and spreadsheets     |

|          |                           |
|----------|---------------------------|
| Say & Do | Enter data manually       |
| Pain     | Errors, delays, data loss |
| Gain     | Automation, fast reports  |

## 2.3 Brainstorming

### Brainstormed Ideas

- Manual CRM system
- Excel-based management
- Web-based CRM
- Salesforce-based CRM
- Automated email system

### Selected Idea:

## Salesforce-based CRM Application for TheChaiShop&Co..

## 3.REQUIREMENT ANALYSIS PHASE

### 3.1 Customer Journey Map

Journey Stages:

- Login
- Access CRM Application
- Enter Customer Data
- Generate Orders
- Calculate Bills
- View Reports
- Decision Making

## 3.2 Solution Requirements

### Functional Requirements

| FR No | Requirement        |
|-------|--------------------|
| FR-1  | User Login         |
| FR-2  | Object Creation    |
| FR-3  | Data Entry         |
| FR-4  | Billing Automation |
| FR-5  | Report Generation  |
| FR-6  | Email Automation   |

## **Non-Functional Requirements**

### **NFR-1: Usability**

The system should be easy to use for sales representatives, managers, administrators, and analysts without requiring technical training.

#### **Requirements :**

- Simple and intuitive user interface
- Clear navigation menus
- Easy-to-understand forms
- User-friendly dashboards

#### **Example:**

A new sales employee should be able to log in, enter customer details, and generate orders within a few minutes without help.

Salesforce Lightning UI provides drag-and-drop features and easy navigation.

### **NFR-2: Security**

The system must protect customer and business data from unauthorized access.

#### **Requirements:**

- Role-based access control
- Secure login authentication
- Encrypted data storage
- Data backup and recovery

#### **Examples:**

- Profiles and permission sets
- Object-level and field-level security
- Restricted billing access
- Secure login and password policies

### **NFR-3: Reliability**

The CRM system should work correctly at all times and store data accurately without loss.

#### **Requirements:**

- Automatic data saving
- Regular system backups
- Error handling mechanisms
- Stable cloud environment

#### **Example :**

If a user enters order data and the internet disconnects, the system should save the information and restore it later.

Salesforce cloud ensures automatic backups.

### **NFR-4: Performance**

The system should respond quickly and handle large amounts of data efficiently.

#### **Requirements:**

- Fast page loading
- Quick report generation
- Smooth dashboard rendering
- Minimal delay

**Example:** When a manager generates monthly sales reports for hundreds of customers, the report should load within 2–3 seconds.

Optimized queries and caching improve speed.

### **NFR-5: Availability**

The system should be accessible whenever required.

#### **Requirements:**

- 24/7 system availability
- Minimal downtime
- Cloud-based hosting
- Disaster recovery

**Example:** Managers should be able to access the CRM system during peak business hours, weekends, or late nights.

Salesforce cloud provides high uptime.

### **NFR-6: Scalability**

The system should support business growth without affecting performance.

#### **Requirements:**

- Ability to handle more users
- Support increasing customer data
- Expandable storage
- Maintain system speed

**Example:** If TheChaiShop&Co expands to multiple branches, the CRM system should support thousands of customers without slowing down.

Salesforce infrastructure automatically scales.

### **3.3 Data Flow Diagram**

User → Salesforce UI → Custom Objects → Validation Rules → Flows → Reports → Dashboards.

### 3.4 Technology Stack

| Layer      | Technology           |
|------------|----------------------|
| Frontend   | Salesforce Lightning |
| Database   | Salesforce Cloud     |
| Automation | Flows                |
| Backend    | Salesforce Platform  |
| Analytics  | Reports & Dashboards |

## 4. PROJECT DESIGN PHASE

### 4.1 Problem–Solution Fit

The CRM system replaces manual records with automated data management. Cloud storage prevents data loss, dashboards improve analysis, and real-time reports eliminate delays. This ensures accurate and timely business insights generation.

### 4.2 Proposed Solution

#### Functional Requirements

| Parameter                        | Description                                                                                                   |
|----------------------------------|---------------------------------------------------------------------------------------------------------------|
| User Login & Authentication      | Allows authorized users to securely log in to the CRM system using valid credentials.                         |
| Customer Record Management       | Enables users to create, view, update, and delete customer details such as name, contact number, and address. |
| Employer & Enterprise Management | Allows management of employer and enterprise account information for business operations.                     |
| Order Management                 | Supports creation and tracking of customer orders, including order quantity and product details.              |
| Automated Billing System         | Automatically calculates total bill amount using formula fields based on order quantity and pricing.          |
| Validation Rules                 | Ensures accurate data entry by validating fields such as phone number, PAN, and Aadhaar.                      |
| Record Types & Page Layouts      | Provides different record types and layouts for various customer and enterprise categories.                   |
| Global Picklists                 | Maintains standardized values for fields such as product type, category, and status.                          |
| Email Notification System        | Sends automated emails to customers for birthdays, offers, and order confirmations.                           |
| Workflow & Flow Automation       | Automates tasks such as updating records and triggering alerts using Salesforce Flows.                        |
| Report Generation                | Generates detailed reports on sales, customers, and enterprise performance.                                   |
| Dashboard Visualization          | Displays real-time analytics through interactive dashboards and charts.                                       |
| Data Backup & Recovery           | Ensures secure storage and recovery of business data in the Salesforce cloud.                                 |
| User Role Management             | Controls system access using profiles and permission sets for different users.                                |

## 4.3 Solution Architecture

### Architecture Layers

1. Presentation Layer – Lightning UI
2. Application Layer – Flows and Logic
3. Data Layer – Custom Objects
4. Analytics Layer – Reports and Dashboards

This layered architecture ensures modularity, scalability, and maintainability.

## 5. PROJECT PLANNING & SCHEDULING

### 5.1 Project Planning

- The project followed an Agile-based development approach with defined milestones and sprints.
- A Salesforce Developer account was created to set up the development environment.
- Custom objects were designed to store customer, employer, and enterprise data.
- Custom tabs and a Lightning Application were developed for easy system navigation.
- Fields, relationships, and global picklists were configured to ensure data consistency.
- Page layouts and record types were created based on user roles and customer categories.
- Validation rules were implemented to prevent incorrect data entry.
- Email templates and automated flows were developed for customer notifications.
- Reports and dashboards were created for performance monitoring and analysis.
- Regular sprint reviews and testing were conducted to track progress and resolve issues.
- The project was completed within the planned timeline through systematic scheduling.

#### Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Use the below template to create product backlog and sprint schedule

| Sprint   | Functional Requirement (Epic) | User Story Number | User Story / Task                                                                                                                        | Story Points | Priority | Team Members |
|----------|-------------------------------|-------------------|------------------------------------------------------------------------------------------------------------------------------------------|--------------|----------|--------------|
| Sprint-1 | Developer Setup               | USN-1             | As an admin, I want to create a Salesforce developer account so that I can configure and deploy the TheChaiShop&Co CRM application.      | 1            | High     | THIRUMALAI A |
| Sprint-1 | Data Modeling                 | USN-2             | As an admin, I want to create Customer, Employer, and Enterprise objects so that business data can be stored and managed systematically. | 3            | High     | THIRUMALAI A |
| Sprint-2 | Data Modeling                 | USN-3             | As a user, I want separate tabs for each object so that I can easily navigate and manage CRM records within the application.             | 3            | High     | THIRUMALAI A |

| <b>Sprint</b> | <b>Functional Requirement (Epic)</b> | <b>User Story Number</b> | <b>User Story / Task</b>                                                                                                                         | <b>Story Points</b> | <b>Priority</b> | <b>Team Members</b> |
|---------------|--------------------------------------|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|-----------------|---------------------|
| Sprint-2      | Data Modeling                        | USN-4                    | As a manager, I want a dedicated Lightning App so that all CRM operations are accessible from a single dashboard.                                | 3                   | High            | THIRUPATHI V        |
| Sprint-2      | Data Modeling                        | USN-5                    | As an admin, I want to create customer and order fields so that complete sales and billing details can be captured accurately.                   | 5                   | Medium          | THIRUMALAI A        |
| Sprint-2      | Data Modeling                        | USN-6                    | As a user, I want customized page layouts for different record types so that only relevant information is displayed during data entry            | 5                   | High            | BHARATHIDASAN R     |
| Sprint-2      | Data Modeling                        | USN-7                    | As a manager, I want separate record types for Retail and Enterprise customers so that different business categories can be managed efficiently. | 5                   | Medium          | THIRUNAVUKKARRASU V |
| Sprint-3      | Automation                           | USN-8                    | As a system, I want to validate customer details and order inputs so that incorrect data entries are prevented.                                  | 3                   | High            | THIRUMALAI A        |
| Sprint-3      | Automation                           | USN-9                    | As a system, I want automated flows to send email notifications so that customers receive timely updates and offers.                             | 5                   | High            | THIRUMALAI A        |
| Sprint-4      | Automation                           | USN-10                   | As a system, I want to automatically calculate billing amounts so that invoices are generated without manual effort.                             | 5                   | High            | THIRUMALAI A        |
| Sprint-5      | Reports                              | USN-11                   | As a manager, I want sales and customer reports so that I can monitor business performance and make informed decisions.                          | 4                   | High            | BHARATHIDASAN R     |
| Sprint-6      | Dashboards                           | USN-12                   | As a manager, I want visual dashboards so that I can quickly analyze sales, customers, and enterprise performance.                               | 4                   | Medium          | THIRUMALAI A        |

### Project Tracker, Velocity & Burndown Chart: (4 Marks)

| Sprint   | Total Story Points | Duration | Sprint Start Date | Sprint End Date (Planned) | Story Points Completed (as Planned on End Date) | Sprint Release Date (Actual) |
|----------|--------------------|----------|-------------------|---------------------------|-------------------------------------------------|------------------------------|
| Sprint-1 | 05                 | 1 Days   | 22 Sep 2026       | 22 Sep 2026               | 05                                              | 22 Sep 2026                  |
| Sprint-2 | 10                 | 1 Days   | 23 Sep 2026       | 23 Sep 2026               | 10                                              | 23 Sep 2026                  |
| Sprint-3 | 15                 | 3 Days   | 24 Sep 2026       | 24 Sep 2026               | 15                                              | 24 Sep 2026                  |
| Sprint-4 | 20                 | 6 Days   | 22 Sep 2026       | 24 Sep 2026               | 20                                              | 24 Sep 2026                  |

### 5. Project Development Phase:

#### What you'll learn

1. Real Time Salesforce Project
2. Standard and Custom objects
3. Picklist Value sets
4. Types of Fields & their relationships.
5. Page Layouts

## Implementation

### Milestone 1 - Salesforce developer account creation :

#### Activity 1: Creating Developer Account:

A Developer org has all the features and licenses you need to get started with Salesforce.

1. Search [Developer.salesforce.com/signup](https://developer.salesforce.com/signup)
2. Enter the following details like First name, last name, Email, Role, Company, Country/Region, Postal code, and Username must be unique.
3. Click sign me up, after a few min you will receive a mail from salesforce org and by using the verify account link you can create your new password.
4. Click save.
5. Search [login.salesforce.com](https://login.salesforce.com)

Login Credentials - SkillWalletSkillWalletDeveloper Edition with AgentforceAsk Gemini

☒ I agree to the [Main Services Agreement - Developer Services](#), [Salesforce Program Agreement](#), and [API Terms of Service](#).

Your free trial may be provisioned on or migrated to Hyperforce, Salesforce's public cloud infrastructure.

I acknowledge, as described in the Developer Documentation: (1) the Developer Edition includes autonomous and other generative AI features; and (2) Salesforce may limit use of those features and the org, and may terminate any org that has been inactive for 45 days.

We value your privacy. To learn more, visit our [Privacy Statement](#).

**6. By using username and password you can into the Salesforce org. The homepage will appear below**

## **Milestone 2-Object:**

### **What is an object?**

**Salesforce objects are database tables that permit you to store data that is specific to an organization. It consists of fields (columns) and records (rows).**

### **Activity 1:**

**Create a custom object for CRM:**

**To create a custom object, follow these steps:**

- 1. From setup click on object manager.**
- 2. Click create, select custom object.**

**3. Fill in the label as " CRM ".**

**4. Fill in the plural label as " CRM".**

**5. Record name: CRM Name"**

**6. Select the data type as "Text".**

1. In your Salesforce org, click gear icon on the top left and select Setup to open
2. 7. In the Optional Features section, select Allow Reports and Track Field History.
3. 8. In the Deployment Status section, ensure Deployed is selected.
4. 9. In the Search Status section, select Allow Search.
5. 10. In the Object Creation Options section, select Add Notes and Attachments related list
6. to default page layout.
7. 11. Leave everything else as is, and click Save.

## **Activity 2:**

Creation of Crop object:

1. Click on the gear icon and then select Setup.
2. Click on the object manager tab just beside the home tab.
3. After the above steps, have a look on the extreme right you will find a Create Dropdown click on that and select Custom Object.

- a. On the Custom Object Definition page, create the object as follows:
- b. Label: Crop
- c. Plural Label: Crops
- d. Record Name: Crop Name
- e. Select the data type as "Text".
- f. Check the Allow Reports checkbox
- g. Check the Allow Search checkbox
- h. In the Object Creation Options section, select Add Notes and Attachments related list
- i. Click Save.

3.

The screenshot shows the Salesforce Setup page with the Object Manager tab selected. The 'Create' button is highlighted, and a dropdown menu is open showing 'Custom Object' as the selected option. The 'Custom Object' page is partially visible, showing the 'Label' field set to 'Employer Account' and the 'Plural Label' field set to 'Employer Accounts'. The 'Record Name' field is set to 'Employer Account Name' and the 'Data Type' is set to 'Text'. The 'Optional Features' section is visible, showing checkboxes for 'Allow Reports', 'Allow Activities', and 'Track Field History', all of which are checked. The 'Search Status' section is also visible, showing the 'Allow Search' checkbox checked. The 'Save' button is at the bottom.

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.

- **Label** : Employer Account
- **Plural Label** : Employer Accounts
- Enter Record Name Label and Format
- Record Name : Employer Account Name
- Data Type : Text
- In **Optional features** : check the boxes for Allow Reports | Allow Activities | Track Field History.
- **Search Status** : check the box for Allow Search.
- Save

## Activity 2 : Customer Account Object

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.
  - **Label** : Customer Account
  - **Plural Label** : Customer Accounts
  - Enter Record Name Label and Format

Record Name : Customer Account Name

Data Type : Text

- **In Optional features** : check the boxes for Allow Reports | Allow Activities | Track Field History.
- **Search Status** : check the box for Allow Search.
- Save

## Activity 3 : Enterprise Account Object

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.

- **Label** : Enterprise Account
- **Plural Label** : Enterprise Accounts
- Enter Record Name Label and Format

Record Name : Enterprise Account Name

Data Type : Text

- **In Optional features** : check the boxes for Allow Reports | Allow Activities | Track Field History.
- **Search Status** : check the box for Allow Search.
- Save

## Milestone 3 - Tabs

### Activity 1 : Custom tabs creation

1. Go to setup page → type Tabs in Quick Find bar → click on tabs → New (under custom object tab)

2. Select Object (Employer Accounts) → Select the tab style → Next (Add to profiles page) keep it as default → Next (Add to Custom App) uncheck the include tab .

3. Make sure that the Append tab to users' existing personal customizations is checked.

4. Click save.

5. Repeat the same steps for Customer Accounts and Enterprise Accounts.

## **Milestone 4 - The Lightning App**

### **Activity 1 : Create a lightning app**

1. Go to setup page → search “app manager” in quick find → select “app manager” → click on New lightning App.

2. Fill the app name in app details and branding as follow

App Name : TheChaiShop&Co

Developer Name : Auto Populates

Add image optional (if you want to give any image you can otherwise not mandatory) - Add Primary color Hex or leave it to default.

Then click Next.

3. In App options  
Navigation style : Standard navigation  
Setup experience : setup  
Supporters form factors : Desktop and phone  
Then click Next
4. In Utility items  
Utility Bar alignment : Default  
Then click Next.
5. Navigation items  
Select the created Custom Objects and required standard objects
  - Customer Accounts
  - Employer Accounts
  - Enterprise Accounts

Reports  
Dashboards

Click **Save**.

## Picklist Value Sets

[Help for this Page](#)

Global picklist value sets let you share the values across objects. Base custom picklist fields on a global value set to inherit its values. The value set is restricted so users can't add unapproved values through the API.

## Milestone 6 : Fields & Relationships

### Activity 1 : Create Custom fields for Employer Account

1. In your Salesforce org, click gear icon on the top left and select Setup to open Setup.
2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.
3. From the object manager page, In the Quick Find box, Search for the custom object you just created : **Employer Account**
4. From the sidebar, click Fields & Relationships. Notice that there are already some fields there. Those are the standard fields.
5. Click New to create a custom field. Tip: Before creating a new field, do a quick search to make sure a similar one doesn't already exist.

#### Fields & Relationships

20 Items, Sorted by Field Label

| FIELD LABEL         | FIELD NAME | DATA TYPE | CONTROLLING FIELD | INDEXED |                   |
|---------------------|------------|-----------|-------------------|---------|-------------------|
| Account Entity Name | Name       | Text(80)  |                   | ✓       | <a href="#">▼</a> |
| Address             | Address_c  | Text(100) |                   |         | <a href="#">▼</a> |

6. Next, choose a data type as Text. Choosing a data type helps you format the field input.

7. Click on next.

Employer Account  
New Custom Field

Step 2. Enter the details

Field Label: **First Name**

Please enter the maximum length for a text field below.

Length: **25**

Field Name: **First\_Name**

Description:

Help Text:

Required: ☒ Always require a value in this field in order to save a record

Unique: ☐ Do not allow duplicate values

☐ Treat "ABC" and "abc" as duplicate values (case insensitive)

☐ Treat "ABC" and "abc" as different values (case sensitive)

External ID: ☐ Set this field as the unique record identifier from an external system

Auto add to custom report type: ☒ Add this field to existing custom report types that contain this entity

Default Value: [Show Formula Editor](#)

Use formula syntax. Enclose text and picklist values API names in double quotes. { "the\_api" }, include numbers without quotes { 25 }, show percentages as decimals { 0.10 }, and express date calculations in the standard format: { Today() + 7 }. To reference a field from a Custom Metadata type record use { \$CustomMetadata.Type\_\_mdcRecord.PName.Part\_5 }

Auto add to custom report type ☒ Add this field to existing custom report types that contain this entity

**Formula Return Type**

☐ None Selected Select one of the data types below.

☐ Checkbox Calculate a boolean value  
Example: `TODAY() > CloseDate`

☐ Currency Calculate a dollar or other currency amount and automatically format the field as a currency amount.  
Example: `Gross Margin = Amount - Cost__c`

☐ Date Calculate a date, for example, by adding or subtracting days to other dates.  
Example: `Reminder Date = CloseDate - 7`

☐ DateTime Calculate a date/time, for example, by adding a number of hours or days to another date/time.  
Example: `{Next = NOW() + 1}`

☒ Number Calculate a numeric value.  
Example: `Fahrenheit = 1.8 * Celsius__c + 32`

☐ Percent Calculate a percent and automatically add the percent sign to the number.  
Example: `Discount = (Amount - Discounted_Amount__c) / Amount`

☐ Text Create a text string, for example, by concatenating other text fields.  
Example: `{Full Name = LastName & " " & FirstName}`

The screenshot shows a formula editor with two tabs: 'Simple Formula' and 'Advanced Formula'. The 'Advanced Formula' tab is active. On the left, there's a text area containing a long formula starting with 'Quantity (Number) =' and followed by a series of IF(INCLUDES(...) conditions for various products and their quantities. Above the text area are two buttons: 'Insert Field' and 'Insert Operator'. On the right, there's a 'Functions' panel with a dropdown menu set to '-- All Function Categories --'. Below the dropdown is a list of functions: ABS, ACOS, ADDMONTHS, AND, ASCII, and ASIN. A red box highlights the 'Insert Selected Function' button at the bottom of the list. At the bottom of the formula editor, there's a 'Check Syntax' button and a status message: 'No syntax errors in merge fields or functions. (Compiled size: 2,269 characters)'.

## **Milestone 7 : Page Layouts**

For the personalized field view in Customer Accounts, let's create two page layouts  
Online orders and Walk-In orders.

### **Activity 1: Online Orders page layout**

1. Go to the setup page → click on object manager → From drop down click edit for **Customer Account** object.
2. Click on the Page Layouts → click New.

3. Page Layout Name : Online Orders and click Save.

Create New Page Layout

[Help for this Page](#)

As an option, you may select an existing layout to clone. If you create a page layout without cloning, your page layout will not include the standard sections whose names are translated for your international users.

## Milestone 8 - Record Types

To Differentiate the records and data stored in Customer Accounts, let's create two different Record Types.

Online orders and Walk-In orders.

### Activity 1: Online Orders Record Type

1. Go to the setup page → click on object manager → From drop down click edit for **Customer Account** object.
2. Click on the Record Types → click New.

3. Enter Details :  
Existing Record Type : Master  
Record Type Label : Online Order  
Record Type Name : Auto Populates  
Active : Tick the checkbox  
Click Next

This screenshot shows the 'New Record Type' form for the 'Customer Account' object. The form is titled 'Step 1. Enter the details' and 'Step 1 of 2'. It contains the following fields:

- 'Existing Record Type' dropdown menu set to '--Master--'.
- 'Record Type Label' text field containing 'Online Order' (highlighted with a red box).
- 'Record Type Name' text field containing 'Online\_Order'.
- 'Description' text area.
- 'Active' checkbox, which is checked (highlighted with a red box).

At the bottom, there is a note about 'Make Available' and 'Make Default' options.

4. In Assign Page Layouts
  - Select Apply one layout to all profiles : select **Online orders** from the drop down menu.

Select the page layout that users with this profile see for records with this record type. After saving, choose the picklist values that are available with this record type.

- ☒ Apply one layout to all profiles Online Orders ▼
- ☐ Apply a different layout for each profile

5. Click **Save and New**.

## Activity 2: Walk-In Orders Record Type

1. Go to the setup page → click on object manager → From drop down click edit for **Customer Account** object.
2. Click on the Record Types → click New.
3. Enter Details :  
Existing Record Type : Master  
Record Type Label : Walk-In Order  
Record Type Name : Auto Populates  
Active : Tick the checkbox  
Click Next
4. In Assign Page Layouts
  - Select Apply one layout to all profiles : select **Walk-In orders** from the drop down menu.
5. Click **Save**.

## Milestone 9 - Validation Rules

### Activity 1: On Employer Account

1. Go to the setup page → click on object manager → From drop down click edit for **Employer Account** object.
2. Click on the validation rule → click New.

6. Repeat the same steps and create two more validation rules on the employer account object.

- **Enter Rule Name :** PAN Number

**Error Condition Formula :**

```
AND(  
  NOT(ISBLANK( Phone_Number__c )),  
  NOT(REGEX( Phone_Number__c , "[1-9]{10}$")),  
  NOT(REGEX( Phone_Number__c , "\\d+$"))  
)
```

**Error Message :** The PAN Details field must not be blank.

The PAN card number does not start with 0.

The PAN card number does not contain special characters.

Click **Save & New**.

- **Enter Rule Name :** Phone Number

**Error Condition Formula :**

```
AND(  
  NOT(ISBLANK( Phone_Number__c )),  
  NOT(REGEX( Phone_Number__c , "[1-9]{10}$")),  
  NOT(REGEX( Phone_Number__c , "\\d+$"))  
)
```

**Error Message :**

The phone number field must not be blank.

The phone number must consist of exactly 10 digits.

The phone number must contain only numeric digits

(no spaces, dashes, parentheses, etc.)

Click **Save**.

## Activity 2: On Customer Account

1. Go to the setup page → click on object manager → From drop down click edit for **Customer Account** object.
2. Click on the validation rule → click New.
3. **Enter Rule Name** : Phone Number

### Error Condition Formula :

```
AND(  
  NOT(ISBLANK( Phone_Number__c )),  
  NOT(REGEX( Phone_Number__c , "^1-9{10}$")),  
  NOT(REGEX( Phone_Number__c , "^\\d+$"))  
)
```

### Error Message :

The phone number field must not be blank.

The phone number must consist of exactly 10 digits.

The phone number must contain only numeric digits  
(no spaces, dashes, parentheses, etc.)

4. Click **Save**.

## Activity 3: On Enterprise Account

1. Go to the setup page → click on object manager → From drop down click edit for **Customer Account** object.
2. Click on the validation rule → click New.
3. **Enter Rule Name** : Phone Number

### Error Condition Formula :

```
AND(  
  NOT(ISBLANK( Phone_Number__c )),  
  NOT(REGEX( Phone_Number__c , "^1-9{10}$")),  
  NOT(REGEX( Phone_Number__c , "^\\d+$"))
```

)

### Error Message :

The phone number field must not be blank.  
The phone number must consist of exactly 10 digits.  
The phone number must contain only numeric digits  
(no spaces, dashes, parentheses, etc.)

4. Click **Save**.

## Milestone 10 - Email Template

### Activity 1: Email Template

1. Go to setup, In quick find box enter Email template → click on classic Email Template.
2. Click on→ New Email Template
3. Choose the type of email template you would like to create : **Text** and click **Next**.

Process Automation Settings

Save Cancel

The default workflow user is required for scheduled paths in record-triggered flows and time-dependent actions in workflow rules. If the user who triggered the automation is no longer active, the default workflow user is associated with the actions that are executed by the automation. The default workflow user always runs schedule-triggered flows.

Default Workflow User Sohan

By default, no email address is set for the Automated Process User. Event processes and autolaunched flows with triggers use the email address to send emails for actions and errors. Orchestrations use the email address to send notifications. To set the email address for the Automated Process User, specify an organization-wide email address for the system administrator profile.

Automated Process User Email Address

By default, the email approval sender is the approval submitter. To override the default sender, select an organization-wide email address.

Email Approval Sender Approval Submitter

Enabling email approval response lets users reply to email approval requests by typing APPROVE or REJECT in the first line and adding comments in the second line.

Enable email approval response

By enabling the email approval response feature, you agree to allow Salesforce to process email approval responses, update approval requests for all active users in your organization, and update the approval object on behalf of your organization's users.

Let users pause flows when they need to wait for more information. Once you enable this setting, the Pause button appears on every screen that has Pause enabled.

Let users pause flows

Let users resume interviews that are shared with them, either directly or via the role hierarchy. When disabled, interviews can be resumed only by the user who paused the interview or a flow admin who has view access.

Let users resume shared flow interviews

Flows launched from a URL or from Setup use the Lightning runtime experience instead of the classic runtime experience. Only Lightning runtime supports two-column flow screens, custom screen components, and local actions.

## Milestone 11 - Flows

Let's create a scheduled Triggered flow to automate the Birthday offer mails.

### Activity 1: Schedule Triggered Flow

1. Go to setup, Type Flow in quick find box → Click on the Flow and Select the New Flow.

Setup Home Object Manager

Flows

Flow Trigger Explorer New Flow

Flow Definitions

All Flows

41 Items • Sorted by Flow Label • Filtered by All flow definitions • Updated a minute ago

| Flow Label                       | Process Type               | Active | Tem... | Package State     | Pack... | Last Mo... | Last Modified Date |
|----------------------------------|----------------------------|--------|--------|-------------------|---------|------------|--------------------|
| Basic Approval Request           | Flow Orchestration for CMS | ✓      | ✓      | Managed-Installed |         |            |                    |
| Book Appointment from Invitation | Salesforce Scheduler Flow  | ✓      | ✓      | Managed-Installed |         |            |                    |

2. Select Schedule - Triggered Flow and click Create.

### 3. Set a Schedule

Start Date : Enter the Date, when you want to start the flow.

Start Time : Enter the Time, when you want to start the flow.

Frequency : Daily

### 4. Create Object

Object : Customer Account

Condition Requirements : All conditions Are Met (AND)

- Field : Date\_of\_Birthday\_is\_today\_\_c  
Operator : Equals  
Value : \$GlobalConstant.True
- Field : Email\_ID\_c  
Operator : IS NULL  
Value : \$GlobalConstant.False

5. Click (+) Icon on the flow builder and Select **Action Component**.

6. In New Action Page

**Filter By** : Type and select Email Alert

**In Action** : Search and select Happy Birthday email alert

**Label** : Send Happy Birthday Email

**API Name** : Auto Populates

**Set Input Values for the Selected Action** : Record ID : {!\$Record.Id}

## Activity 3: Dashboard

- Click Dashboards
- Click New Dashboards

| Dashboard Name | Description | Folder | Created By | Created On | Subscribed |
|----------------|-------------|--------|------------|------------|------------|
|----------------|-------------|--------|------------|------------|------------|

- Name : Customer Vs Enterprise Sales
- Click Create.

The screenshot shows a 'New Dashboard' dialog box. The 'Name' field is filled with 'Customer VS Enterprise Sales' and is highlighted with a red rectangle. The 'Description' field is empty. The 'Folder' dropdown is set to 'Private Dashboards'. At the bottom right, the 'Create' button is highlighted with a red rectangle, while the 'Cancel' button is not.

5. Click Widget
6. Select Chart or Table.

The screenshot shows the same 'New Dashboard' dialog box. The 'Name' field is now filled with 'Farmers with farms'. The 'Description' field remains empty. The 'Folder' dropdown is still set to 'Private Dashboards'. The 'Create' button is now highlighted with a blue border, while the 'Cancel' button is not.

7. Select Customer Account Sales Report

8. Display As : Select the one which you feel comfortable with.
9. Click **Add**.

The screenshot shows a report titled 'Report: Farmers with Farms' and 'Farmers with Farms Report'. It includes a table with columns: Farmer, Farmer Name, Farm, Farm Name, Contact Number, Farm Size(Acres), and Farm Type. The table lists three farms: Paddy Farm, Sugar Farm, and Wheat Farm. A subtotal and total row are also present.

| Farmer    | Farmer Name | Farm       | Farm Name | Contact Number | Farm Size(Acres) | Farm Type |
|-----------|-------------|------------|-----------|----------------|------------------|-----------|
| Rajesh    |             | Paddy Farm |           | 999436770      | 10               | Livestock |
| Rajesh    |             | Sugar Farm |           | 999436770      | 10               | Crop      |
| Kavase    |             | Wheat Farm |           | 788262778      | 15               | Livestock |
| Subtotal  |             |            |           |                | 25               |           |
| Total (3) |             |            |           |                | 25               |           |

10. Repeat the same steps for the Enterprise Account Sales Report.
11. Click **Save**.

Total Records

## **Milestone 12 - Conclusion**

In conclusion, the development of TheChaiShop&Co CRM application marks a significant stride in enhancing the store's operational efficiency and customer relationship management capabilities. Seamlessly integrating employer details, customer information (both online and offline), and enterprise data, this application streamlines business processes and enables informed decision-making. The automation of sales calculations, including order quantity and total bill amount, reduces errors and empowers employees to focus on delivering exceptional service. Moreover, automated email notifications for customers' birthdays foster personalized communication and enhance customer engagement.

## **7.FUNCTIONAL & PERFORMANCE TESTING**

During the testing phase, screenshots were captured from the Salesforce Lightning interface to verify correct system behavior. These include:

- Record creation for Employer, Customer, and Enterprise objects
- Validation rule testing for Aadhar, PAN, and phone numbers
- Verification of record types and page layouts
- Formula field validation for order quantity and billing
- Flow execution for birthday email alerts
- Report and dashboard generation

Performance testing ensured fast response time and system stability during concurrent usage.

## **8. ADVANTAGES & DISADVANTAGES**

## **Advantages**

- Centralized data management
- Reduced manual work
- Automated calculations
- Improved customer engagement
- Real-time analytics

## **Disadvantages**

- Requires Salesforce license
- Internet dependency
- Limited offline access

## **9. Conclusion:**

- Helps manage customer information efficiently.
- Maintains customer and order details in an organized manner.
- Reduces manual work and saves time.
- Improves customer relationship and service quality.
- Makes sales and business data easy to access.
- Helps track customer orders and interactions.
- Improves overall shop management and productivity.
- Provides a simple and user-friendly CRM solution.
- Supports better decision-making for The Chai Shop & Co.
- Can be enhanced with more features in the future.

## **10. FUTURE SCOPE**

- Mobile CRM integration
- AI-based sales prediction
- WhatsApp/SMS alerts

- Inventory management
- Multi-branch support
- Advanced customer profiling

## **11.APPENDIX**

The appendix contains supporting information and resources used during the development and implementation of the **A CRM APPLICATION FOR THE CHAI SHOP & CO** using Salesforce.

### **A. Source Code**

The project source consists of Salesforce configuration, metadata, custom objects, fields, relationships, workflows, validation rules, automation, reports, and dashboards developed for the **A CRM APPLICATION FOR THE CHAI SHOP & CO**

### **B. Dataset**

The system uses agricultural data related to:

- CRM Records – CRM details, land information, and CRM Application activities.
- CRMS Records – CRM names, contact details, and related CRM information.
- Crop Records – Crop names, types, cultivation details, production information, and crop status.
- Buyer Records – Buyer details, contact information, and purchase-related records.

### **C. Tools and Technologies Used**

- Salesforce Developer Org – Used for developing and configuring the application.
- Salesforce Objects and Fields – Used to store and organize agricultural data.
- Salesforce Flow/Automation – Used to automate repetitive processes.
- Reports and Dashboards – Used for data analysis and monitoring.
- Salesforce Lightning Experience – Used to create an interactive and user-friendly interface.

**Thank You**
